

Create

Your Own Fountain

By Jungle Labs/www.junglelabs.com

The No-Fuss Fountain

Create a little piece of paradise for your patio, porch, office or special setting inside your home by following our simple step-by-step directions on how to build a soothing and beautiful water feature. Our fountain brings serenity to any spot and now even a beginner can build it in three simple steps, outlined below.

What's Needed:

- 2 pots, one that pours, one that receives
- pot stand (optional)
- river rocks (5 pounds)
- plastic tubing (2 feet)
- pump (70 gallon/hour)
- tap water
- Jungle® Fountain Keeper® kit

Step One:

Design your fountain. Place pots or containers in a position where you can have water from one flowing into the other. In this case, we have a plant stand supporting a spill pot that has a flat bottom, which is designed to be used in a fountain or pond. Use gravity to assist with the water flow. Most types of containers will work: simply look for a hole in the back, which is made to accommodate tubing to ensure it will perform.

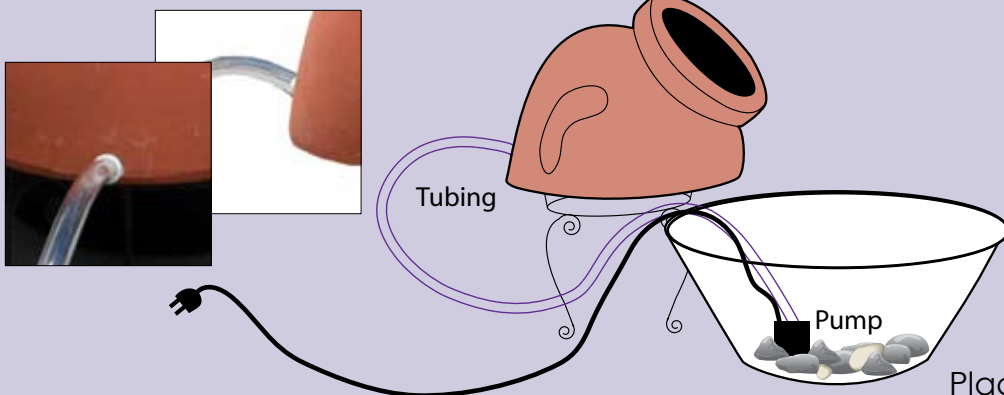

Step Two:

Insert pump. Place the pump inside the receiving container in a place that is discreet; behind or below the water flow is a good choice, as it will be camouflaged by the water movement. Connect the tubing to the pump and bring it behind to the back of the other container. Once connected (to the other container), your fountain is ready for water. Remember not to turn on the pump until water is added, otherwise it can burn up the motor.

Place the tubing into the back of the container and connect to the pump.

How To

Place the pump into the water.

Create Your Own Fountain

Step Three:

Add Water. Add enough water to fill the receiving pot, yet leave several inches untouched below the rim so the spill effect can occur. Decorate the fountain with river rocks and floating plants. The rocks will add depth to the fountain and the plants will promote clearer water. Around the exterior of the fountain, strategically place plants to hide the cords. Once the rocks, water and plants are in, plug in the pump.

Step Four:

Maintenance. Use a treatment for water to help keep the minerals to a minimum. Using Jungle's No More White Scale® for Fountains will keep your water feature beautiful and clean. With hard water being prevalent in most areas, white scale can form on almost anything once water evaporates. So it is important to keep the water level consistent and treat the water with a product that will prevent unsightly white scale and help keep the pump working effectively. Also, if too much light hits the fountain, you may experience algae growth. To prevent algae, use Jungle's No More Algae® for Fountains and if foam forms, try No More Foam® for Fountains.

Step Five:

Enjoy! For product information and helpful tips, go to www.junglelabs.com. If you need additional assistance on water quality issues, please call Jungle's helpful and courteous customer service representatives at 1-800-357-7104.
